Will Sardelli serves as a senior team member and project consultant for MBDⁱ. Will has over 30 years of business management experience in both military and commercial programs involving technology-based systems. His major responsibilities have included research, development, and design of information systems, command and control, air space management, communication and intelligence, air defense, and logistics systems.

He is a subject matter expert in technology enablers, business planning, quality assurance, event/dependency planning, logistics management, strategic marketing, acquisitions, divestitures, mergers and due diligence investigations.

Will's experience ranges from serving as Chief Engineer for Research and Development at General Dynamics, where he managed special nuclear assignments for the United States Government, to serving as Vice President for Mergers and Acquisitions and Corporate Quality at American Systems Corporation.

Will holds the patent for wave action simulations and the distinction of having designed and implemented the first electronic submarine simulator.

His prior executive experience also includes positions as President of the Systems Development Corporation at the Unisys Corporation, as well as Vice President of Research and Development at Stromberg Carlson.

Will has served on advisory boards at the University of Rhode Island (Engineering), George Washington University (Graduate School), the University of Florida Board of Visitors, and the Fairfax Cable Access Corporation.

He earned a B.S. in Electrical Engineering and a Ph.D. in Information Systems, along with being a licensed Professional Engineer.
